

**Raising the Benchmark
in Access Control**

Temaline — A New Level of Access Control and Management

Honeywell Temaline Solutions Redefine the Access Control Applications Market

The Honeywell Temaline Solution lifts security to an unprecedented level, providing value for your investment. Flexible and stable, whether managing 10 or 1,000 readers, it provides innovative, active access control that meets the most demanding of security needs.

Temaline utilizes the latest IT technologies, enabling integration with your business processes. The IT integration with the cardholder management database facilitates effective supervision of employees. It also makes cardholder registrations and management of visitors and contractors more efficient.

The Honeywell Temaline is a global platform locally supported by over 100 local offices in the Americas. Its high stability, ease of IT integration and superior serviceability make it the ideal platform for your demanding security needs.

High Availability

To be of value, a security solution must be highly reliable. At the field level, the key component of the systems are rated at 60,000 to 80,000 mean time between failures hours (MTBF). Temaline's controller to controller communication is consistent and reliable. In the rare case that a host (PC) server should fail, the controllers will continue to communicate to each other, keeping the security network fully available and fully alert.

Shared Load

The shared load architecture is unique to Temaline. It underpins system availability providing unprecedented redundant control for key access controls. Should a controller fail, another takes charge of the field devices and continues to manage them without loss of functionality or degradation.

Server Redundancy

Redundancy of the supervisory platform is critical to system availability and uptime. Honeywell's redundancy solution far exceeds the standard industry cluster solutions found in most systems today.

Global leader, local service ...

With Honeywell's more than 40 years' experience in the security business, customers around the world enjoy the backing of a \$30 billion technology leader and local service from one of the largest customer support organizations known to the industry.

No one covers the globe like Honeywell.

Managing People

Access Management and Control

- Effective employee interaction through system feedback and information exchange
- Manages time in hazardous areas — minimizes risk and protects personnel
- Path control helps direct personnel flow
- Fully operational controller-level mustering and management for emergency evacuation

Credential Management

- Goes beyond card management to biometrics of all types
- Fully integrated ID badging
- Photo ID authenticates and manages employees, contractors and visitors
- Streamlines processing

Reception Management

- Speedier visitor check-in/out with easy-to-use data entry
- Pre-registering capability
- Web-based registration option
- Comprehensive address book

- Records and analyzes visitor data
- Assigns and administers temporary cards
- Gives a professional first impression to visitors
- Image capture capability
- Document capture capability (any kind of document via a scanner)
- Capability to manage date by using the standard calendar (as proposed to the Temaline interface)
- Visitor arrival notification
- Multi-language support for WEB clients

Multi-Applications

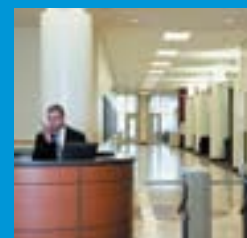

System Integration and Enterprise Resource Management

- Integration with other building management functions
- Integration with business systems such as SAP, LDAP, Oracle and PeopleSoft
- Single source of control — manage access control, time and attendance through one interface
- Improved information management
- More effective situational awareness during emergencies
- Performance gain for operating personnel
- Elevator management

Visitor Management

- Keep track of visitors
- Authorize to particular zones
- Improve visitor perception of organization
- Enhance security
- Track where visitors are/have been

Technology

Advanced Technology

The Temaline uses the latest technology simplifying the interface between IT and physical security.

- Open systems architecture
- Contact and contactless card support
- Biometric capability
- Protects your investment

Cost Reduction

Honeywell innovation reduces the lifecycle cost of security systems.

- Lowest cost to install
- Reduced operating costs
- Lowest total lifecycle cost
- Common off-the-shelf technologies

Risk Mitigation

The Temaline's high availability architecture ensures that the system is online when needed.

- Real-time information status
- Single point of control
- Fast and efficient
- Peer-to-peer communication
- Consistent performance
- High system availability

Reputation

Honeywell has over 100 service offices in the Americas. Our local service teams ensure that your systems are ready when needed.

- Local support and expertise
- Long-term partner
- Easy upgrade and expansion
- Proven technology available globally

Multi-Site

The Temaline system supports using a common card across the globe. This increases security and reduces operational time to manage multiple cards across your infrastructure.

- Distributed Server Architecture
- Advanced holiday management
- One card — multi-time zone capabilities
